# Predict. Compete.

## *Complete on-chain quests.*

The entertainment layer for xStocks. Compete, predict and get rewarded, for points.

● Live on Solana mainnet · [dulo-iota.vercel.app](https://dulo-iota.vercel.app)

Points only, no cash value

## THE PROBLEM

# 800,000+

Solana addresses hold a tokenized stock.

Blockworks via Solana Compass, 12 Sep 2026

### For a holder

After the first buy there is nothing to do. No reason to come back tomorrow, no reason to hold through earnings, no reason to add a second name.

Buying the first one is  
easy. *Staying is not.*

### For every app built on tokenized stocks

It has to find those holders itself, one campaign at a time, with no shared score to build on and no way to verify what a holder actually did.

— DULO

# Three games. *One Season leaderboard.*

## Predictions

Points-only Yes or No on whether NVDA, TSLA or SPY closes above the strike on Friday.

## Competition

A weekly trading competition with \$10,000 of virtual cash at real prices. Not real money, not real trades.

## Quests

Verified actions with a proof on each: in-platform, or read from your own wallet on-chain.

**Nobody hits a dead end.** On first sign-in every player gets 1,000 starter points for predictions and \$10,000 of virtual cash for the weekly competition, so all three games work from the first minute, with or without an xStock.

Plus one tool, **Copy a portfolio**: an allocation and one prefilled Jupiter swap per leg, signed in your own wallet. Everything on one Season leaderboard.

# Will NVDA close above *the strike* on Friday?

- Points-only Yes or No on NVDA, TSLA and SPY, a new set each week.
- Settled from the Friday close, with the price source shown on the card.
- The side that settles right shares the whole pool, and nobody on it gets back less than they put in.
- 100 points by default. Starter points can go in, but only settled results count toward rank.

\$10,000 of virtual cash. *Real prices, 24/7.*

- A weekly trading competition at real xStock prices, including PreStocks pre-IPO tokens.
- Not real money and not real trades: nothing is bought on-chain.
- Top 10 with 3+ trades that week earn points, 1,000 for first.
- Labelled house bots keep the board busy and never earn.
- Wall Street closes; Solana does not. Every price carries its source and age.

# Verified actions, *each with a proof.*

IN-PLATFORM · 1,000 POINTS

## Completed as you play

With virtual cash and points: a first prediction, three paper trades, paper trades in five different xStocks or three different pre-IPO tokens.

ON-CHAIN · 2,950 POINTS

## Verified from your own wallet

Holding, diversifying, buying steadily, holding through earnings, matching a portfolio you chose to copy. Four queue a soulbound Token-2022 badge.

Three Predictions

**No quest tells anyone to buy a security.** An on-chain quest describes a wallet state, and the proof shows the wallet reached it. Adding a quest is a database row, not code: every quest is a JSON rule evaluated by one engine.

— NO ACCOUNT NEEDED

# Check any wallet. *Copy any portfolio.*

Paste an address and Dulo reads its xStocks and pre-IPO tokens live from Solana, then runs every quest against it with the same engine the Season uses: what it already qualifies for, and what it would score once connected.

**Copy a portfolio** turns any wallet's allocation into one prefilled Jupiter swap per leg. You sign in Jupiter, in your own wallet. No custody: the only transaction Dulo ever sends is a badge mint.

PRESTOCKS

Pre-IPO tokens, 24/7

Trade them with virtual cash in this week's competition, complete pre-IPO quests, and see what the mint says.

How it works

US market · closed · opens in 55m

The US session chip is for xStocks. Pre-IPO tokens quote on Solana at any hour, and every price carries its source and age.

THE BOARD

Eight pre-IPO tokens

DEX price from Jupiter, the issuer's mark from PreStocks, and Jupiter's 24h move.

Two prices, two sources: the DEX quote Dulo trades on and the mark the issuer publishes. Each carries its own age. The issuer mark is the issuer's own valuation of the underlying, not a tradeable quote.

Pre-IPO tokens are Token-2022 mints on which the issuer holds freeze, pause and permanent-delegate authority and a transfer hook: the issuer can freeze or move a balance without the holder's signature, and every transfer pays a 1% fee. Any swap is yours to make from your own wallet.

| TOKEN                                                                                                                                   | DEX PRICE · 24H MOVE                                              | ISSUER MARK                                                             |

# Pre-IPO tokens, *same engine.*

- Eight pre-IPO tokens read from Token-2022 balances with the ScaledUiAmount multiplier applied: SpaceX ×5, OpenAI ×1.4861347, both live.
- Priced by Jupiter, with the issuer's own mark shown beside the DEX price as two different numbers.
- Paper-tradable 24/7 with virtual cash in the weekly competition.
- Four pre-IPO quests with a proof on each, and a corporate-actions feed read straight from the mint: more tokens shown, the same value held.

No second code path. One AssetSource interface, a fence on every quest, and a regression suite proving xStocks scoring never moves when a wallet also holds pre-IPO tokens.

— WHY SOLANA

# Behaviour is *public state*.

## Read, not claimed

Sitting through earnings is read from RPC, not reported by a broker, and anyone can check it again.

## Split-correct

Token-2022 ScaledUiAmount keeps every balance right through every on-chain adjustment.

## Never closed

Jupiter Price v3 quotes the xStock mint itself, so every game works with US markets closed.

## One signature

Sign one message to play. No transaction, no custody, no Anchor program.

The whole codebase sends exactly one kind of transaction: a soulbound badge mint. Every swap a player makes is their own, in Jupiter.

— POINTS, AND THE LINE DULO NEVER CROSSES

# Points only. *No cash value.*

- An append-only ledger with a unique ref on every row: a retry, a crash or two sign-ins at once can never pay twice.
- Season points = quests + weekly competition finishes + settled prediction results.
- Starter points never count toward rank, and points in an open prediction count only once it settles.
- Points cannot be bought, cashed out or sent to another player.

## WHERE SPECULATION LIVES

Real-wallet quests pay for holding, diversifying and buying steadily. Speculation stays in the virtual-cash competition and the points-only predictions.

Onboarding, *not churn.*

— WHERE IT GOES

# One score, *carried across apps.*

## TODAY

The entertainment layer for xStocks.

## NEXT

The entertainment layer for tokenized assets.

## THEN

Any app or issuer runs competitions, predictions and rewards for its own holders on Dulo's API, and a player carries one score across them.

## The model, as a plan

Players are free. Partners would list on-chain quests and pay per verified completion, and apps and issuers would sponsor competitions. Nothing is charged today: a plan, not revenue.

# Live, *and honest about it.*

No xStocks? Everything below still works except the on-chain quests, and those are visible on any public wallet at `/check/<address>` without signing in.

Points only, no cash value. Not investment advice. xStocks are not available to U.S. persons or in restricted jurisdictions. Pre-IPO tokens give economic exposure only, with no ownership or voting rights, carry a 1% fee on every transfer, and are not available in the U.S. or to U.S. persons; the companies named do not issue or endorse them. Dulo is independent and not affiliated with xStocks (Backed Finance owns that brand) or PreStocks.

01

## Connect a wallet

Sign one message. There is no transaction.

02

## Welcome

1,000 starter points and \$10,000 of virtual cash. Starter points don't count toward rank.

03

## Predict

100 points in on NVDA. First Prediction (+50) completes in the same request.

04

## Compete

Three paper trades in three xStocks: First Paper Trades (+50) and Paper Portfolio (+75).

05

## Pre-IPO

One paper trade in a pre-IPO token with virtual cash: First Pre-IPO Trade (+50).

06

## Quests

In-platform with next steps, on-chain with proofs, partner quests marked coming soon.
